

Dessi Georgieva

AI Systems Engineer

London, UK · dessi.georgieva8@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#) · [AI Knowledge Hub](#)

Summary

AI systems engineer building the layer between models and dependable products: tool execution, context construction, evaluation, evidence, failure recovery, and human control. I work primarily in Python, FastAPI, TypeScript, React, and AWS. My public projects explore how agent systems can learn while keeping decisions and provenance inspectable; my employer work includes backend services, data workflows, and multi-tenant platform infrastructure.

Technical Focus

- **Agent systems:** tool-use policy, execution state, approvals, idempotency, recovery, provider adapters, retrieval, streaming
- **Evaluation and learning:** regression suites, deterministic replay, synthetic and observed validation, evidence ledgers, belief revision
- **Backend and data:** Python, FastAPI, Pydantic, pytest, SQL, PostgreSQL, embeddings, clustering
- **Product and infrastructure:** TypeScript, React, Next.js, Astro, Node.js, AWS, Terraform, Docker, CI/CD

Selected Systems

Agentic Commerce Control Plane

Collaborative public engineering project · Active development · [Repository](#)

- Designed supervised agent execution with registry-pinned tools, principal-aware policy checks, immutable receipts, and explicit approve, pause, retry, and recovery transitions.
- Built a governed feedback loop with more than 280 Python test functions across policy, replay, recovery, validation, and receipt integrity.

Learning Foundry

OpenAI Build Week submission · Submitted state frozen during judging · [Repository at submitted commit](#)

- Built an append-only evidence ledger and deterministic projections that separate sources, human understanding, shared theory, agent memory, and capability state.
- Implemented and evaluated a consent-gated Codex capability with reviewable activation, provenance, IPC, accessibility, and fallback tests.

DG-OS Agent Runtime

Personal public system · Active · [Portfolio](#) · [Repository](#)

- Built a retrieval-backed agent interface with deterministic commands, provider adapters, streaming contracts, health checks, and explicit fallbacks.
- Added source-aware diagnostics and more than 180 TypeScript test declarations covering routing, context, streaming, provider health, and desktop state.

Experience

Engineer

Performics Innovations Lab · Publicis Media · London · Nov 2023 – Present

- Design and build AI and data systems spanning FastAPI services, AWS workflows, multi-tenant platform controls, behavioural modelling, and marketing-intelligence interfaces.
- Delivered backend services and data workflows for an award-recognised ecommerce optimisation platform using FastAPI, AWS Glue, Lambda, and PostgreSQL.
- Employer code, client information, operational measurements, and infrastructure remain confidential; public descriptions are intentionally limited to responsibilities and outcomes.

Senior Business Intelligence Analyst

Publicis Media · London · Mar 2023 – Nov 2023

- Bridged marketing analytics and decision systems, moving reporting workflows toward reusable intelligence services and platformised decision support.

Business Intelligence Manager

Jellyfish · London · Jan 2021 – Mar 2023

- Built enterprise analytics applications and data workflows, including Shiny applications, AWS ETL, and data-lake patterns.

Data Consultant / SQL Developer / Data Analyst

Selected contracts · London · 2017 – 2020

- Delivered CRM, analytics, segmentation, automation, and experimentation systems for agencies, startups, and media organisations.

Education

MA Applied Human Rights

University of York · 2009 – 2011

BA Philosophy, specialising in Philosophy of Science

Sofia University · 2003 – 2007
