

Dessi Georgieva

Applied AI Engineer · Agent Systems, Evaluation & Reliability

London, UK · dessi.georgieva8@gmail.com · [LinkedIn](#) · [GitHub](#) · [Application evidence](#)

Profile

AI systems engineer focused on the layer where model capability becomes accountable behaviour: tool execution, context construction, evaluation, evidence, failure recovery, and human control. I build public agent runtimes in Python and TypeScript and deliver backend and data infrastructure in an enterprise environment. I am applying to the Codex Core Agent team because my strongest work is not a chat interface; it is the runtime, policy, feedback, and product surface around agents.

Role-Relevant Engineering

Agent execution, policy, and recovery

Agentic Commerce Control Plane · Python, FastAPI, Pydantic, pytest, TypeScript · [Public repository](#)

- Designed supervised execution with registry-pinned tools, principal-aware preflight checks, effect classes, immutable events, external-agent receipts, and idempotent jobs.
- Made failure states actionable through explicit approve, pause, retry, and recovery transitions instead of opaque retries.
- Built a governed learning loop separating synthetic validation, observed outcomes, belief revision, and human approval.
- Maintained more than 280 Python test functions spanning runtime policy, API contracts, replay, validation, recovery, credentials, and receipt integrity.

Codex capabilities, evaluation, and provenance

Learning Foundry · TypeScript, React, Codex, deterministic projections · [Submitted repository state](#)

- Directed the product thesis and epistemic boundaries, then built the append-only evidence ledger, deterministic projections, learning checks, and capability lifecycle.
- Implemented a consent-gated Codex adapter that separates preparation from activation and keeps capability state reviewable.
- Added an evaluated value-density capability plus regression tests for provenance, state transitions, IPC boundaries, accessibility, and fallback behaviour.
- Preserved the submitted commit unchanged while OpenAI Build Week judging remains active.

Context construction, provider reliability, and agent UX

DG-OS Agent Runtime · TypeScript, Astro, React, Node.js, retrieval, streaming · [Live system](#) · [Repository](#)

- Built deterministic command routing alongside evidence retrieval so navigation does not depend on model interpretation.
- Implemented provider adapters, schema-checked API boundaries, streaming contracts, health probes, and opt-in fallbacks.
- Added source-aware answers and diagnostics that expose evidence and provider behaviour to the user.
- Maintained more than 180 TypeScript test declarations covering routing, context, streaming, API contracts, provider health, fallback, and desktop state.

Technical Skills

- **Primary:** Python, FastAPI, Pydantic, pytest, SQL, PostgreSQL
- **Agent systems:** tool-use policy, execution state, approvals, receipts, idempotency, replay, retrieval, context construction, provider adapters
- **Evaluation:** regression suites, deterministic checks, synthetic and observed validation, provenance, failure classification
- **Product:** TypeScript, React, Next.js, Astro, Node.js, REST APIs, streaming interfaces
- **Infrastructure:** AWS, Terraform, Docker, CI/CD, multi-tenant architecture
- **Applied ML:** embeddings, semantic similarity, unsupervised clustering, confidence-aware intent analysis

Professional Experience

Engineer

Performics Innovations Lab · Publicis Media · London · Nov 2023 – Present

- Design and build AI and data systems across FastAPI services, AWS workflows, multi-tenant platform controls, behavioural modelling, and marketing-intelligence interfaces.
- Delivered backend services and AWS data workflows for an award-recognised ecommerce optimisation platform using FastAPI, Glue, Lambda, and PostgreSQL.
- Work within employer confidentiality constraints: public materials describe responsibilities and outcomes, not private code, clients, logs, or infrastructure.

Senior Business Intelligence Analyst

Publicis Media · London · Mar 2023 – Nov 2023

- Bridged analytics and decision systems, turning recurring analysis into reusable services and platformised workflows.

Business Intelligence Manager

Jellyfish · London · Jan 2021 – Mar 2023

- Built analytics applications and data workflows spanning Shiny, AWS ETL, and data-lake patterns.

Data Consultant / SQL Developer / Data Analyst

Selected contracts · London · 2017 – 2020

- Delivered CRM, analytics, segmentation, automation, and experimentation systems across agencies, startups, and media organisations.

Evidence Boundaries

- Public repositories demonstrate agent architecture, evaluation discipline, and product implementation; they do not establish production-scale Codex traffic.
- I do not claim model fine-tuning experience or a public coding-task solve-rate benchmark.
- Token cost, latency, capacity, and employer-system operational measurements are not publicly available.

Education

MA Applied Human Rights, University of York · 2009 – 2011

BA Philosophy (Philosophy of Science), Sofia University · 2003 – 2007
